### STATISTICAL STATEMENT.

#### (Vital Statistics)

Statement 1.—Births registered in the districts of the United Provinces during the year 1943	16
1(a)—Still birsth registered according to classes and sexes of U. P. during 1943	20
II.—Deaths registered in the districts of U. P. during 1943	24
III.—Deaths registered in the rural districts and towns of the U. P. during 1943	28
IV.—Deaths registered according to age in rural districts and towns of U. P. during 1943	64
IV(a)—Deaths of infants under one year registered in the rural districts and towns of the U. P. according to class during 1943	164
V.—Deaths registered according to classes and sexes in the districts of the U. P. during 1943	214
VI.—Deaths from different causes and births registered in the rural districts and towns of the U. P. during 1943	232
VI(a)—Deaths registered from certain causes in the rural districts and towns of U. P. during 1943	328
VII.—Deaths registered from cholera in the districts of U. P. during each month of the year 1943	472
VIII.—Deaths registered from smallpox in the districts of the U. P. during each month of the year 1943	484
Statement IX.—Deaths registered from fevers in the districts of the U. P. during each month of the year 1943	496

	Page
Statement X.—Deaths registered from dysentery in the districts of the U. P. during each month of the year 1943	508
XI.—Deaths registered from respiratory diseases in the districts of the U. P. during each month of the year 1943	520
XII.—Deaths registered from plague in the districts of U. P. during each month of the year 1943	534

### (VACCINATION)

Statement No. I.—Showing particulars of vaccination in the U. P. during the year 1943	544

# Seventy sixth Annual Report of the Director of Public Health, United Provinces, for the year Ending December 31, 1943.

## CHAPTER I METEOROLOGY

*The cold weather period, January and February.*—Western meteorological disturbances affected the Province in January giving it some rain. Humidity was in excess. February was dry.

*The hot weather period, March to May.*—East U. P. was practically dry during March but in the last week rain was fairly widespread in western part, the total rainfall being in large defect. The rainfall in April was in large excess. In May the Arabian Sea monsoon extended temporarily into the west of the Province towards the close of the month but the rainfall of the month was in moderate defect.

*Monsoon period, June to September.*—Humidity was in defect in June. Rainfall was in excess there being good rains in August and September. A cyclonic storm from the east in September centred near Benares, causing serious floods in Benaras-Jaunpur area.

*The retreating monsoon period, October to December.*—This period was generally dry. Humidity was in excess in December.

*Temperature.*—Maximum temperature was above normal in March, May, November and December. Minimum temperature was above normal in January and February. Maximum temperature was below normal in April and August. The total rainfall of the year taken as a whole was normal.

## CHAPTER II VITAL STATISTICS

The following are the chief statistical data for the year 1943 :

(a) *Comparison of Provincial figures with those of preceding year :*

	Total		Rural		Urban	
	1943	1942	1943	1942	1943	1942
Mild-year estimated population.	56,563,382	55,902,197	49,433,925	48,922,955	7,129,457	6,979,242
Total Births ...	1,397,513	1,593,416	1,177,081	1,348,809	220,432	244,607
Birth rate per mille.	24.71	28.50	23.81	27.57	30.92	35.05
Total Deaths ...	1,087,445	1,073,429	907,289	858,298	180,156	175,131
Death rate per mille.	19.23	18.49	18.35	17.54	25.27	25.09
Infantile deaths...	188,066	227,994	141,973	177,069	46,093	50,925
Infant death rate per thousand births.	134.57	143.09	120.61	131.28	209.10	208.16

*(b) Comparison by communities in the Province.*

		Birth rate per mille		Death-rate per mille	
		1943	1942	1943	1942
Hindus	...	24.79	28.69	19.57	18.62
Muslims	...	26.14	29.52	14.94	19.15
Europeans and Anglo Indians	...	13.78	14.16	5.51	7.12
Indian Christians	...	14.09	13.14	7.80	7.10
Other classes	...	5.29	6.83	3.63	4.09

*(c) Comparison with figures of other provinces for 1943.*

Province.		Birth rate per mille.	Death rate per mille.	Rate of natural increase.	Infant mortality per thousand births.
1.	United Provinces	24.71	19.23	5.48	134.57
2.	Central Provinces	37.04	27.68	9.36	206.13
3.	Orissa	30.75	30.30	0.45	202.55
4.	Punjab	32.40	24.97	7.43	189.92
5.	N. W. F. Province	16.94	15.31	1.63	132.39
6.	Sind	15.00	11.59	3.41	118.03

Birth-rate in the U. P. has undergone a steady decline in the past few years, from 34.72 per thousand of the population in 1940 to 32.08 in 1941, 28.50 in 1942 and 24.71 in 1943. The rates in most of the other provinces have also declined. Owing to non-publication of the reports for most of them it is not possible to compare the rate in all cases. Figures for three provinces which are available are as follows :

		Birth-rate per mille.	
		1940	1943
1.	Central Provinces	37.58	37.04
2.	Punjab	47.84	32.40
3.	Bombay	42.07	34.4 in 1942.

The death-rate for the province, on the other hand, has not varied likewise, being 21.78 per thousand of the population in 1940 and 19.23 in 1943. The slight decrease is attributable to smaller birth-rate, and to consequent smaller number of infantile deaths which so greatly influence general death rates. The same is generally the position in other provinces for which information is available.

2 *Registration of vital statistics.* (a) Reporting of births and deaths is compulsory in urban areas. The number of persons fined for failure to report these events was 1,054 against 1,125 in 1942.

(b) The cause of death as registered with municipal health authorities is invariably as reported by the family. In the municipal towns where wholetime Medical Officers of Health are employed, the cause, as reported at the time of registration, was verified in about 50 per cent. of the deaths registered, and was found incorrect in ten per cent. of the cases verified.

(c) In rural areas where registration is not compulsory medical officers of health check omissions as well as inaccuracies during their tours. From the first point of view 1,254,936 entries in chaukidars' registers were checked.

### CHAPTER III.

#### GENERAL HEALTH OF THE PROVINCE INCLUDING EPIDEMIOLOGY OF CHIEF DISEASES.

*Cholera* was responsible for 25,705 deaths (1,587 in towns and 24,118 in rural areas) against a total of 7,662 deaths in the year 1942. All districts except Almora were affected for varying periods, those in central U. P. having a heavier incidence. Highest number of deaths was recorded in the month of October. 908,582 anti-cholera inoculations were given against 493,928 in the preceding year. Over 2,420 lbs. of permanganate of potash, 781 cwts. of bleaching powder, 1,390 lbs. of kaolin and 2,137 lbs. of Essential Oils Mixture were issued, and temporary regulations under the Epidemic Diseases Act were enforced in many areas. Grants amounting to Rs. 25,410 were given during the year 1943-44 for expenses in connexion with the control of the epidemic other than the cost of staff, and disinfectants and medicines supplied from central stocks.

2. *Plague* was comparatively less, 7,556 deaths having been reported (388 from towns and 7,168 from rural areas) against 8,953 in 1942. Eleven districts were affected, highest mortality being reported from Jaunpur district. Over 175,230 anti-plague inoculations were performed against 132,852 in 1942. Other preventive measures consisted of evacuation of infected localities and anti-rat campaign, for which grants amounting to Rs. 17,684/- were given.

In December 1942, the attention of all chairmen of municipal boards and notified areas, and of all District Medical Officers of Health, was drawn to the need for intensive anti-rat campaign, specially in grain markets, in areas where plague had been active in the preceding cold weather and in and around labour camps. Cyanogas fumigation was adopted to a limited extent only owing to want of supplies. Baiting with barium carbonate and trapping were also adopted.

3. *Smallpox* was responsible for 5,928 deaths (1,070 in urban areas 4,858 in rural areas) against 4,479 in 1942. Highest mortality was reported from Ghazipur district.

4. *Fevers.* This comprises Malaria, Enteric fever, Measles, Relapsing fever, Kala-azar, Influenza, Cerebrospinal fever, Typhus fever and other fevers. The mortality from all these fevers was 884,071 against 833,853 in 1942. The incidence of the more important of the fevers is discussed below

(a) *Malaria*. Last year's epidemic continued during 1943. The number of deaths was 800,694 (38,661 in towns and 762,033 in rural areas) against 747,462 (33,752 in towns and 713,710 in rural areas) in 1942. Measures adopted to deal with the epidemic are mentioned in Chapter VII along with other work done by the Malaria branch of the department.

(b) *Relapsing fever*. Was responsible for 206 deaths (70 in towns and 136 in rural areas) against 77 (39 in towns and 38 in rural areas) in 1942.

(c) *Enteric fever* was responsible for 7,454 deaths (4,208 in urban and 3,246 in rural areas) against 7,479 (4,257 in urban and 3,222 in rural areas) in 1942. Over 16,200 c. c. of T. A. B. Vaccine were issued, primarily for inoculation of Government servants.

(d) *Kala-Azar*. Seventy three deaths were registered under this head (48 in urban and 25 in rural areas) against 117 (45 in urban and 72 in rural areas) in 1942. Banaras and Gorakhpur divisions were the chief affected areas. The campaign against the disease consists of detection and treatment of cases. Two travelling dispensaries were placed exclusively on survey and detection by spleen examination, and by formaldehyde test, in rural areas of Gorakhpur district, and were also supplied medicines for outdoor treatment. Treatment facilities were provided at the Sagar hospital and at three branch dispensaries, to which the medical officers of travelling dispensaries were required to send the more advanced cases. During the year, 717 cases were treated by all agencies in Gorakhpur district. One travelling dispensary was similarly placed on survey and treatment work in Benares district and detected 48 cases. Three dispensaries in Benares city were supplied the required drugs and treated 690 cases. The number of treatment centres in both places has since increased. Further extension of the organisation for detection and treatment of cases in rural parts of eastern U. P. is under consideration.

(e) *Influenza* was responsible for 289 deaths (125 in urban and 164 in rural areas) against 391 (162 in urban and 229 in rural areas) in 1942.

(f) *Cerebrospinal Meningitis* was responsible for 60 deaths (52 in urban and 8 in rural areas) against 51 (42 in urban and 9 in rural areas) in 1942, and was as usual sporadic and scattered in its incidence. Arrangements exist at all district hospitals and many branch dispensaries for the treatment of this disease. The municipal infectious diseases hospital at Cawnpore and Benares are also recognised for such treatment, a financial allotment in proportion to the number of cases treated at them being given from the provincial revenues as necessary.

5. *Respiratory diseases*, were responsible for 36,901 deaths against 38,116 in the previous year. Pneumonia and pulmonary tuberculosis are the main diseases in this group. Their incidence is noted below :

(a) *Pneumonia* was responsible for 16,425 deaths (16,298 in urban and 127 in rural areas) against 16,402 (16,064 in urban and 338 in rural areas) in 1942.

(b) *Tuberculosis (pulmonary)* was responsible for 4,643 deaths (4,219 in urban and 424 in rural areas) against 5,302 (4,563 in urban and 739 in rural areas) in 1942.

*Tuberculosis of bones and joints*—(not included in the general head respiratory diseases) was responsible for 123 deaths (71 in urban and 52 in rural areas) against 200 (103 in urban and 97 in rural areas) in 1942. Deaths from other tubercular diseases numbered 2,057 (1,467 in urban and 590 in rural areas) against 2,459 (1,690 in urban and 769 in rural areas) in 1942.

By the end of 1943, Tuberculosis dispensaries had been started in eight towns of the province. Further extension was limited by the shortage of X-ray

material and of health visitors trained in Tuberculosis work both so essential in this scheme. Cases registered at these dispensaries were kept under observation in the homes with a view to early diagnosis, and patients and contacts were advised on the hygienic measures to be followed in the home, and on diet and treatment.

The position of employees suffering from tuberculosis had so far been somewhat uncertain, as some authorities were in favour of invalidation at the earlier stages. After a review of all aspects of the matter, the Provincial Government issued certain general orders during the year. Heads of offices are now required to send up government servants, suspected to be suffering from tuberculosis, for examination by a civil surgeon. Fees for X-ray examination are paid by Government in the case of employees drawing pay upto Rs. 400/- p. m. If the disease is found upon examination to be 'closed' and the government servant is fit to carry on his duties, he is to be allowed to resume his post subject to continued medical supervision and periodical reexamination. In the case of an 'open' case leave to the maximum limit considered necessary is to be granted, and he is to be allowed to resume work if he has become a 'closed' case by that time.

6. *Dysentery and Diarrhoea* were responsible for 17,040 deaths (14,287 in urban and 2,753 in rural areas) against 16,595 (13,628 in urban and 2,967 in rural areas) in 1942. As in last year, highest mortality occurred in the district of Garhwal which was followed by the districts of Agra and Moradabad.

7. *Beri-beri* was responsible for 33 deaths (22 in urban and 11 in rural areas) against 36 (28 from towns and 8 from rural areas) in the preceding year.

8. *Injuries*—were responsible for 14,569 deaths, viz., 1,334 from suicide, 10,238 from wounds or accidents, 2,616 from snake bites, 152 from rabies and 219 from injuries caused by wild animals. The figures for 1942 are 1,251 from suicide, 10,748 from wounds and accidents, 2,177 from snake bites, 171 from rabies and 215 from wild animals.

9. *All other causes*.—The number of deaths reported under this head was 95,675 against 109,269 in 1942.

10. *Deaths at child birth*—(i.e. maternal mortality) numbered 1,810 (1,541 in urban and 339 in rural areas) against 2,134 (1,736 in towns and 398 in rural areas) in 1942. The lower figure for rural areas is not indicative of any better condition in such areas, but to great under-reporting under present defective system of registration.

11. *Leprosy*.—In accordance with the current conception that this is an infectious disease, spread principally by direct contact, and possibly through clothing and belongings, the present method of dealing with it is by discovering cases as soon as possible in order to control its spread in the community, and to give the patient the benefit of treatment. There is too much suppression of this disease, necessitating special effort on the part of health workers to find cases. The U. P. Branch of the British Empire Leprosy Relief Association employ a special officer for survey, detection and treatment of cases in the province. During the year 1943, this officer worked in Sitapur district, where he made village to village survey, explained to the families concerned on home isolation of cases and on avoidance of infection and the value of treatment over a long period. He also started their treatment but many did not take a prolonged course. The officer also lectured at meetings of the local medical association.

The Provincial Branch of the Association maintained three treatment clinics at Benares, Cawnpore and Lucknow,

## CHAPTER IV.

## FAIRS AND FESTIVALS.

Measures to safeguard the health and sanitation at annual fairs and festivals were as usual supervised by the public health staff and there was no outbreak of any infectious disease in them. The gatherings were greatly limited on account of restrictions on rail travel and petrol supply. No large fair of special importance was held during the year.

## CHAPTER V.

## SANITATION AND WATER SUPPLY IN URBAN AREAS.

*Treatment of infectious disease.*—A new scheme for the treatment of Cholera, Dysentery, Cerebro-spinal Meningitis, Tetanus, Measles and Enteric fever in the isolation blocks and yellow fever wards of district hospitals was introduced during the year. It applies to 32 places. Treatment is given by medical officers attached to the hospitals. Accommodation in the blocks, though limited, is generally enough for the ordinary requirements, as most of these places do not have a large number of cases to justify a separate hospital for infectious diseases. The municipal boards which have to meet the cost of maintaining these blocks and of treatment given to patients admitted in them have been saved the greater expense of maintaining separate staff and equipment not usually needed during the most part of the year.

2. *Municipal conservancy.*—The maintenance of municipal conservancy services presented difficulty owing to insufficiency of staff and appliances. In many towns it was not possible to obtain the required number of sweepers even on increased pay. A scheme for the construction of quarters to be allotted to sweepers on nominal rent, which is a much needed amenity, was prepared by the municipal board of Cawnpore and a loan from Government was also obtained, but it could not be given effect to on account of the difficulty of obtaining building material. A threatened strike in Allahabad municipality was averted when the Director of Public Health issued a warning under the Essential Services (Maintenance) Ordinance, 1941, to all sweepers and Jamadars, who had previously been brought under the purview of that Ordinance. Reports of dispute over the amount of wages were received from Jhansi, Etawah, Cawnpore and Lucknow, and in the last case the question was referred to the Labour Commissioner. The difficulty in the removal of rubbish in Cawnpore was overcome when extra petrol was allotted for the purpose.

## CHAPTER VI.

## RURAL SANITATION.

The District Health Service was extended to the Cawnpore district, making a total of 40 districts where the service operated.

2. Advice was as usual given by the Public Health staff on the construction of village sanitary works like soakage pits, manure pits, bored-hole latrines and absorption pits and improvement of village wells. The Health Unit established at Partabgarh in 1932 continued to serve as training ground in rural health work. The Board of Public Health sanctioned grants aggregating Rs. 35,289 during the year 1943-44 for small public health works in rural areas including improvement to water supplies, against Rs. 80,388 in the year 1942-43. The reduction was due to postponement of some works owing to non-availability of building material.

3. *Rural Development Scheme*.—Sanitary improvements in rural development villages were carried out by the staff of the district health service in collaboration with those of the rural development department. These measures were generally carried out by villagers themselves, but in order to ensure fulfilment of essential requirements, and to maintain improvement carried out from public funds, district boards were required to adopt sanitation byelaws, and to delegate to District Medical Officers of Health the power to initiate proceedings for their infringement.

The scheme of elementary medical relief by the supply of village medicine chests was continued 4,289 chests having been replenished or supplied during the financial year 1942—43. From April 1, 1943, the control of this scheme was transferred to the Rural Development Officer.

One out of 24 maternity centres sanctioned under the scheme did not function during the year for want of a trained worker. Training of indigenous dais formed an important item of the work of these centres.

4. *Expenditure by District Boards on Public Health*.—The total income of district boards in the province from all sources, including Govt. grants, during the year 1942—43, was Rs. 2,02,16,562 and excluding such grants Rs. 1,09,70,631. Their total expenditure on Public Health was Rs. 6,15,799, as detailed below :

	Rs.
(i) Vaccination ... ..	3,11,674
(ii) Public Health Establishment other than vaccination ... ..	2,20,588
(iii) Epidemics ... ..	29,321
(iv) All other Public Health purposes ... ..	54,216

Receipts of these Boards from Government, the Board of Public Health and from other sources for Public Health purposes amounted to Rs. 73,142. Out of their own revenue of Rs. 1,09,70,631 the boards thus spent Rs. 5,42,657 or 4.9 percent. on Public Health. In the year 1941—42 the percentage of such expenditure was 4.7 and in 1940—41 it was 4.0.

## CHAPTER VII.

### MALARIA.

Malaria in epidemic form was reported from 28 districts against 23 in 1942. The incidence was comparatively great in the districts of Bulandshahr, Mainpuri, Muttra, Jalaun, Farrukhabad, Meerut and Etawah. Approximately 1,000 lb. of quinine and cinchona were distributed free of charge to actual sufferers by this Department from Provincial Government's reserve. Demands were in excess of the available supply and had therefore to be curtailed with due regard to the requirement of each area, but indents from all Government and Government-aided medical institutions were met in full, and at no time were stocks insufficient to meet essential needs. The scheme of providing treatment cheaply by selling quinine packets through rural post offices was continued as usual. Acute shortage of insecticides prevented anti-mosquito measures except in institutions like Police lines.

2. Malaria surveys and investigations on specific problems were carried out in 17 areas and recommendations made to the authorities concerned.

3. A special enquiry as to the best means of controlling malaria had been in progress since 1938 in Naini Tal Terai and in irrigation tracts of Hardoi

district, as the problem of malaria control in these two areas is largely typical of that in the province. The enquiry had to be suspended early in 1943 owing to shortage of supplies and personnel, but is to be resumed after the War.

4. *Sale of quinine products.*—The Public Health Department is responsible for—

(a) distribution, on the basis of sale, of quinine and cinchona (powder and tablets) needed by Government and Government-aided hospitals and dispensaries and other Government Departments (Forest, Agriculture Rural Development and Public Works), and by Post Offices for rural sales ; and

(b) Sale of quinine released at a cheap rate by the Government of India for the benefit of the general public, owing to very high prices charged for it in the market.

In the first category the quantity sold was 7,999 lbs. of quinine and cinchona. As regards the second, the scheme prepared in 1942 for the sale of the drug to the public through excise vendors was modified and, with restrictions on selling prices, supplies were made to medical practitioners, chemists and private institutions. The public under this scheme obtains quinine powder at Rs. 35 per lb. or at about one eighth of the price charged by dealers for the same article obtained through ordinary trade channels. Out of the available stock of about 5,300 lbs. of quinine the quantity issued under this scheme was 2,186 lbs. The demand was less than that expected, apparently owing to the imposition of restrictions as to the sale of such quinine at the stated prices only, but greater demands have been made since the beginning of 1944.

## CHAPTER VIII.

### MATERNITY AND CHILD WELFARE.

The number of centres increased to 358 from 339 in 1942 and the number of Health Visitors to 31 from 29. The number of Assistant Midwives fell to 359 from 364 of the previous year. The figures include the staff and centres relating to Rural Development Scheme.

2. The number of confinements conducted by the staff of the centres in the year 1943 was 45,968 against 45,876 in 1942. Infantile mortality among cases conducted by the staff was 53.35 per thousand, against 298.8 per thousand among those not confined by them. Mortality rate among mothers whose confinements had been conducted by the trained staff was 4.4 against 7.15 per thousand among those not attended by them. The latter however is an underestimate, as reliable statistics in respect of death of mothers due directly to child birth is not available except in cases of confinement at institutions or by trained workers. Over 1,440 abnormal cases were referred to hospitals by the staff of the centres.

3. The training of Health Visitors was continued at the Silver Jubilee Health School. Under present war conditions it is difficult to get candidates for this training. Five were in the class held in 1943.

4. Efforts were as usual made for the training of dais, but response, which depends upon the popular demand for better midwifery service, was meagre. Candidates for Assistant Midwives' training were also far less than the present requirements. Conditions of service and pay for workers attached to local centres were standardised in the year 1942 but have not been enforced in some areas owing to lack of funds.

5. *Finance*—The main source of the income of local centres is an allotment out of a lump grant of Rs. 1,52,600 provided by the Provincial Government and Rs

14,073 by the U. P. Branch of the Indian Red Cross Society to the maternity and child welfare section of the Red Cross. Contributions, including grants from Municipal and District Boards, amounted to Rs. 1,23,784.

## CHAPTER IX

### HEALTH OF THE SCHOOL CHILD

School medical inspections in the United Provinces are conducted by

- (i) wholetime school health officers in 13 larger towns and ;
- (ii) municipal and district medical officers of health in other places.

The scheme of examination is more detailed in English Middle and High School and less detailed in other institutions. Detailed examinations were conducted in 320 out of 360 institutions specified for this purpose, and 36,000 scholars out of about 1,16,800 on roll were seen. As three examinations only in the entire course of a scholar's period of study upto the High School standard is required to be made, all scholars on roll in an institution are not required to be examined. Keeping this in view, the number inspected was fairly high. Over 6,700 scholars were examined as special cases.

The scheme of ordinary examination applies to vernacular middle and primary schools, both in urban and rural areas. In the urban areas 248 institutions out of 596 subject to the scheme were visited and 14,650 out of 72,600 boys on roll were examined and advised. In rural areas 1,949 institutions out of 10,597 were visited and 109,000 scholars out of 736,300 on roll were seen and advised.

2. *Defects.*—The following is a table of the main defects noticed in urban and rural group of scholars. Figures for the previous year have been given for purposes of comparison :

Nature of defect.		Percentage of cases found defective.			
		Urban		Rural	
		1943	1942	1943	1942
1. Poor nutrition	...	17.7	16.7	17.4	20.0
2. Teeth and gums	...	10.1	11.1	10.2	13.0
3. Pyorrhoea	...	1.9	1.7	1.9	1.6
4. Tonsils and adenoids	...	15.6	15.6	5.6	6.0
5. Mouth breathing	...	2.5	3.9	1.1	1.6
6. Other glands	...	5.6	6.1	2.4	3.5
7. Diseases of eyelids	...	7.3	9.7	4.0	6.3
8. Defective vision	...	8.9	8.8	Not examined	
9. Enlarged spleen	...	1.5	1.7		
10. Skin diseases	...	2.6	2.7	3.1	3.1
Boys with one defect only	...	40.6	44.9	28.0	30.4
Boys with more than one defect	...	15.0	15.8	10.0	18.8

3. *Correction of defects.*—Separate clinics for the treatment of school children exist in 13 larger towns only, where wholtime school health officers are employed. The school health officer himself gives necessary treatment at these stations. At other places boys are supplied a written memorandum by the School Health Officer for presentation at the nearest dispensary or to their own doctors. Parent and guardians have begun to take interest in medical inspections as they have accompanied their children to the clinic to consult the School Health Officer. In 13 places with separate clinics 27,080 new and 54,915 old cases were treated. Approximately 800 of these were tested for refraction by honorary Ophthalmologist and approximately 3,900 for dental defects by honorary Dentists attached to some of these clinics. *Filaria* being a problem in Gorakhpur separate arrangements for treatment of school boys suffering from it were made at the district hospital. A sum of Rs. 3,956 out of funds provided by Government for the maintenance of the clinics was spent on free supply of milk to ill-nourished children who were in indigent circumstances, and for the supply of spectacles to poor boys.

4. *Health education*—was carried on by school health officers during contact with boys and through the Junior Red Cross. School Health Officers also gave a large number of plague and cholera inoculations and vaccinations in schools and gave lectures on prevention of blindness, hygiene sanitation and infectious diseases, including tuberculosis, and conducted the first aid course of the St. John Ambulance Association at training colleges and schools.

## CHAPTER X.

### HEALTH PROPAGANDA.

Health education was as usual carried on by officers of the Hygiene Publicity Bureau, and by District, Municipal and School Health Officers, by means of lectures, exhibitions and magic lantern demonstrations. Posters and leaflets were used on suitable occasions and articles were contributed to various papers. A publicity van, fitted with health models films, loudspeakers and gramophone records gave 75 demonstrations in 15 districts to an approximate gathering of about two lakh people. Separate demonstrations on health subjects were also given to Indian Troops and followers in Cantonments. A new film on the requirements for maintaining health was produced.

1. *Education against Tuberculosis.*—The Provincial Government gave a recurring grant of Rs. 5,500 and a non-recurring grant of Rs. 8,000 in the year 1942-43 for the preparation of material for education on Tuberculosis. Fifty copies of a 35 mm. trailer film on the subject, with sound commentary in Hindustani and 200 slides with Urdu and Hindi script, were prepared out of this sum, and distributed through District Officers to cinema houses free of charge for display during shows. For instructional purposes a set of 18 pictorial posters on the same subject were supplied to all child welfare centres. These posters and some literature were also supplied to over 3,800 schools carrying on the work under Junior Red Cross programme.

3. *Red Cross.*—Over 110,900 scholars (of whom 3,247 were girls) were registered in 5,763 Junior Red Cross groups in 3,803 schools during the year, against 96,895 scholars in the previous year. Ninetyseven per cent. of the year's membership was in vernacular schools. The groups did a certain amount of health education in their areas, besides practising the rules of health themselves, which is the primary purpose of membership.

4. *St. John Ambulance Association.*—Total number of persons trained in the various courses of the Association and granted certificates was 5,141 against 7,311 in 1942. The number of school children granted certificates in Mackenzie

School Course of first Aid, Hygiene and Sanitation was 5,289 against 5,703 in 1942. The demand for training in 1942 was larger than usual owing to the general risk of air raids.

The number of Ambulance Divisions at the close of the year was 25 with a total strength of 814 members, against 23 and 769 in 1942. The number of Nursing Divisions was 13, with a total strength of 400 and that of cadet Divisions of Boys and Girls was 32 with a membership of 704. District Centres of the Association gave occasional assistance to local Army authorities for training work in first Aid. In Garhwal some members of the local Centre visited families of soldiers on active service, and gave help to pilgrims proceeding to Badrinath.

## CHAPTER XI.

### PUBLIC HEALTH ADMINISTRATION.

The post graduate and post-licentiate courses which officers of the department have to attend after some years of service were made more comprehensive in order to make the officers fully conversant with the procedure of accounting, sanitary law and administration which they have to deal with on being posted as district and municipal medical officers of health.

2. The rules governing the appointment of Assistant Superintendents of Vaccination were revised. Previously these posts were filled by selection from among vaccinators. Appointments are still made by district boards but under the revised rules candidates have to pass an examination in vaccination procedure and rules, and elementary sanitation, which is held under the control of the Director of Public Health. The service was also re-graded under two classes on pay of Rs. 40-2-50 and Rs. 60-3-75, instead of in three, with various intermediate stages previously.

3. *Inoculation by Vaidas, Hakims and Sanitary Inspectors*—For sometime the Board of Indian Medicine U. P., and Vaidas and Hakims, have been asking for authority to undertake prophylactic inoculations. In order to utilise this ancillary aid to anti-epidemic work it was decided to give the recognition in respect of Plague, Cholera and Typhoid inoculations, and only to such practitioners as may undergo a proper training in the subject. The course of training extends over two weeks and is given free of charge by the District Medical Officer of Health once a year. The syllabus comprises lectures on the principles of bacteriology and infection, sterilisation, technique of inoculation, dosage and contra-indications. Practical work in all stages of the technique is also required, with at least 20 inoculations under supervision of the medical officer of health. Vaidas and Hakims who have passed out of a college and have obtained the Diploma recognised by the Board of Indian Medicine after a five-year course of study are only trained.

Similarly, the training of selected sanitary inspectors of rural areas, where the need of inoculation by medical men cannot be adequately met, was also authorised.

4. *Budget grants.*—A total sum of Rs. 27,22,300 for the year 1943-44 (against Rs. 27,68,345 in the year 1942-43) was provided for the entire department of Public Health, including the Public Health Engineering section and grants-in-aid for sanitary works, out of which a sum of Rs. 20,65,319 was for activities directly controlled by the Director of Public Health.

## CHAPTER XII.

## VACCINATION

Vaccination statements are prepared separately for 'towns' including semi-rural areas, and for 'rural districts'. There are 444 areas under the former and vaccination is compulsory in 264 of them which come within the category of a municipality, notified area, town area or contonment.

Taking the figures of all towns 353, 513 or nearly 5·0 per cent. of the population were vaccinated in 1943 against 325, 849 or 4·7 per cent. in 1942. In the case of rural districts 1, 458, 516 or nearly 3·0 per cent. of the population were vaccinated in 1943 against 1, 512, 386 or 3·0 per cent. in 1942.

The approximate number of children under one year of age available for vaccination in 1943 was 174,339 in towns and 1, 035, 108 in rural districts, of whom 128, 903 and 762, 755 respectively or 73. 94 per cent. and 73. 69 per cent. were vaccinated. The number vaccinated in the age group 1-6 years was 46, 790 in towns and 394, 089 in rural districts against 43, 349 and 3, 9, 555 in 1942.

2. The number of vaccinations performed in 1943 was 1, 854, 668 (1, 466, 617 primary and 388, 051 revaccinations) against 1, 873, 649 (1, 577, 194 primary and 296, 455 revaccinations) in 1942. The number of operations performed a second time owing to the failure of the first operation was 12, 139 against 11,231 in 1942. The percentage of successful vaccination in which results were known was 97.25 in the case of primary operations against 97. 05 in 1942 and 51.63 in the case of revaccinations, against 39. 87 in 1942. No case of encaphalitis following vaccination was reported.

3. Total expenditure by local bodies on vaccination amounted to Rs. 3,92, 176 (Rs. 3, 10, 601 in rural areas and Rs. 81, 575 in urban). Taking the figures for the province, the average cost on each successful case of vaccination was annas four, which is nearly the same as in the past few years.

## GOVERNMENT VACCINE DEPOT.

The amount of vaccine lymph manufactured was 149, 550 grammes (representing 3, 738, 750 doses) against 134, 011 grammes (representing 3, 350, 275 doses) in 1942. The quantity of lymph issued during the same period was 148, 377 grammes (3,709, 431 doses) against 131, 629 grammes (3, 290, 737 doses) in the previous year. Usual purity tests were carried out on every consignment before issue. The cost of lymph manufactured worked out to slightly over two pies per dose. Difficulties were experienced in obtaining calves for the preparation of vaccine lymph.

## CHAPTER XIII.

## OTHER PUBLIC HEALTH SERVICES.

*Travelling dispensaries.*—From April 1, 1943, administrative control of Rural Development travelling dispensaries (16 in number) as well as of one travelling dispensary in Garhwal was transferred to this department. There was thus a total of 48 units under this department for public health and elementary medical work, including 31 previously under the public health department. They visited over 5,000 villages and treated over 234,760 persons. Most of the Rural Development dispensaries however had to be closed for want of medical men.

The staff of travelling dispensaries was as usual supplemented by employing temporary medical officers at the outbreak of large or widespread epidemics.

## HYGIENE INSTITUTE.

2. *Training of health personnel.*—The following courses, and examinations connected with them were held at the Institute :

- (i) Post-graduate and post-licentiate courses for officers of the Provincial and Subordinate public health services.
- (ii) a course of training for sanitary inspectors.
- (iii) a part of the course for health visitors, and
- (iv) the course in Hygiene for the M. B., B. S., of the Lucknow University.

3. Eight hundred and seven samples of water from various sources were examined for chemical and bacteriological tests as to their fitness for human consumption of which 101 examinations were to check over the analysis of water being done locally at municipal laboratories. One hundred and forty-nine samples were also examined for various other purposes. Reports of local medical officers of health on analysis of the water supply in their areas were scrutinised and advice to improve quality given where necessary. An investigation is being made to lay down standards of turbidity of water for discharge on to filter beds. Investigations were made on the cause of the prevalence of gastro-enteritis in Unao Jail and in Kanpur city, of meningitis in Moradabad Jail, and of suspected cases of pellagra in Hamirpur Jail.

4. *Manufacture of cholera vaccine.*—Over 279,460 c.cs of cholera vaccine were manufactured.

## ANTI-RABIC TREATMENT.

5. The number of patients who attended treatment centres under this department was 14,176 against 15,827 in the preceding year. Eighty two per cent. of the patients had been bitten by dogs, 10 per cent by jackals and eight per cent. by other animals. The cost of treatment was recovered from 636 persons who did not come within the rule for free treatment, against 390 in 1942.

6. Indigent patients coming from out stations are allowed maintenance for the days they have to stay on for treatment. The usual rate of maintenance allowance was raised from annas four to annas eight per day in plains and from annas six to annas twelve per day in the hills owing to high prices.

## PUBLIC ANALYST.

7. The total number of samples of food and drugs submitted to the public Analyst for analysis as to adulteration was 10,284 against 11,223 in 1942. The decrease is due to limitation of the number of samples from each local area, owing to shortage of reagents needed for analysis.

The following table shows the result of analysis :

Name of food samples.	Number of samples received for analysis in 1943.	Percentage of adulteration.	
		1943	1942
1. Ghee	2,980	16.4	17.32
2. Milk	3,875	47.4	41.77
3. Butter	97	18.5	31.07
4. Flours	554	36.3	18.17
5. Edible Oils	1,355	18.9	6.34
6. Miscellaneous including drugs	1,423	21.5	24.3
Total	10,284	29.8	23.6

Samples received from Dehra Dun municipality showed the highest percentage of adulteration (58·7), followed by Naini Tal (57·5) Aligarh (48·7) Mussoorie (38·8) and Bareilly (38·9).

8. *Prosecutions*.—The number of persons prosecuted for selling adulterated articles was 2, 882 (against 2, 597 in 1942) of whom 1,938 were convicted and fined, (13 persons being also sentenced to imprisonment); ten were warned, 79 were acquitted, 125 remained untraced. 12 cases were withdrawn or dismissed, and 718 were pending. Fine inflicted in the 1,938 cases in which prosecution was successful was Rs. 1, 11, 881 (against Rs. 87, 829 for 1, 735 cases in 1942). The level of fines is increasing, though slowly, the average per conviction in 1943 having been Rs. 57·7 against Rs. 50 in 1942, Rs. 40·3 in 1938 and Rs. 27·3 in 1943. The highest average of fine per case was Rs. 118·8 levied in Mussoorie, followed by Rs. 105·2 in Meerut. The lowest was Rs. 15·1 in Muttra.

9. *Legislation*.—The Butter, Ghee and Fat licensing rules of 1930 were replaced by the rules of 1943. The 1930 licensing rules were applicable only after their adoption by the local body. The rules of 1943 come in force in a place where the general provisions of the Act in respect of butter, ghee or fat have been applied. The authority to issue licenses under these rules has been vested in medical officers of health.

10. *Analysis of drugs*.—A large number of pharmaceutical preparations manufactured in India were found to be grossly adulterated, and some were found to be below the standard laid down in the British Pharmacopoea. Forty three out of 111 samples analysed were found adulterated or below the required strength. Prosecutions were instituted by local authorities.

11. *Facilities for laboratory tests*.—Centres which are temporary at present were opened at Benares, Cawnpore, Meerut Bareilly, Gorakhpur, Allahabad, Lucknow and Dehra Dun, for blood tests and examination of clinical material from infectious cases and for diseases requiring early bacteriological examination for epidemiological purposes. Each centre is to serve a group of neighbouring districts and material sent by a civil surgeon, district or municipal medical officer of health or a medical officer of infectious diseases hospital from such district is examined free of charge. That submitted by private medical practitioners is also examined if such examination is in public interest, for which a nominal charge is made.

#### ANALYSIS OF RAILWAY WATER SUPPLIES.

12. Railway administrations in this province are required, during prevalence of cholera, and during pilgrim seasons, to disinfect the water supplied by them to passengers at their stations. Disinfection in the case of cholera was sometimes missed owing to station masters being unaware of epidemic outbreaks in their areas. Orders were accordingly issued for District Medical Officers of Health to inform station masters of outbreak of cholera near the stations, and for railway staff to keep station wells disinfected on receipt of such information upto ten days after the last case has occurred in the area, information of this fact being sent to the station staff. Sanitary Inspectors of the district health staff were authorised to inspect station wells during such periods.

---

## CHAPTER XIV

### PUBLIC HEALTH LEGISLATION.

Model byelaws for regulating the sale of *sharbat* and ice-cream were issued by the Provincial Government, and are being adopted by municipal boards.

## INDUSTRIAL HYGIENE.

2. In their capacity of Additional Inspectors, district and municipal medical officers of health inspected sanitation of factories, the working condition of operatives and the provisions made for their health, safety and convenience and made recommendations where necessary. In some factories smallpox vaccination and cholera inoculation were given to labour employed in essential industries.

3. A new rule was added to the U. P. Factory Rules, 1935, requiring district or municipal medical officers of health as ex officio Inspectors of Factories to inspect the water supply of all factories twice a year where the water is not drawn from municipal or railway supplies, or where infection is suspected, to have samples analysed and recover the cost of analysis from factory owners. In the case of factories employing less than 100 persons payment is not required to be made unless a subsequent test becomes necessary owing to failure of the owner to provide satisfactory installation.

4. Accumulation of molasses owing to restriction of transport is creating nuisance in the neighbourhood of some of the sugarmills.

## LABOUR CAMPS.

5. As in the previous year, this department organised medical and sanitary arrangements at a large number of labour camps attached to construction and other works of the Defence Department.

## PREPARATION FOR AIR RAIDS.

6. During the latter part of 1942 and the first quarter of 1943, the organisation of the larger towns was examined for providing adequate sanitary staff and supplies under conditions of air raid, and orders for augmenting them were passed where necessary. The reserves thus created are proving of help in normal administration, owing to continued delay in obtaining supplies.

## SUPPLIES TO OTHER PROVINCES.

7. Demands were made on this province for staff and supplies required in other parts of India, and these were supplied as far as possible. For instance, four Gazetted Medical Officers of Health, eight others, and 12 sanitary inspectors were provided for Assam, and one medical officer was recruited for Aden. One sanitary inspector and 308 sweepers were recruited for Assam and two hundred sweepers for Bengal. Twenty five vaccinators were lent to Delhi, following a sharp outbreak of small-pox there. Cholera vaccine to the extent of 3,13,006 doses was supplied to the Government of Bengal, and one lakh doses to the Government of Central Provinces.

LUCKNOW,

Dated June 29, 1944.

A. HAMID,

*Director of Public Health, U. P.*
